1 Product Introduction

ViEye® Intelligent Grasping Camera is an active binocular stereo-vision 3D camera designed for intelligent grasping applications. It can rapidly generate point cloud data models, RGBD data, depth maps, grayscale images, and color images. The camera is adaptable to a wide range of complex environments, maintaining high-precision modeling even under challenging conditions such as strong light, reflective surfaces, and light-absorbing black objects. It enables functions such as object scanning, positioning, dimension measurement, and pose recognition. When used with dedicated software, it supports grasping path planning to perform tasks like workpiece picking and item sorting according to predefined processes.
